## 1. Split Subjects Evenly To Training & Testing

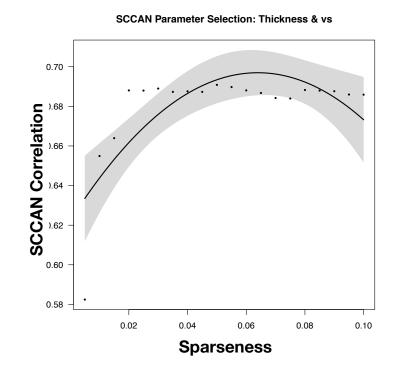

## 2. Training Stage

## 2.2 Maximize SCCAN correlation with respect to the Sparseness Parameter

**Train** 

**Test** 

2.3 Store optimal solution vectors.

## 3. Testing Stage

- 3.1 Apply optimal solution vectors from 2.3 to test data matrices.
- 3.2 Find the final correlation between the weighted brain network (i.e. Xx) and the weighted PBAC sub-scale (i.e. Yy).
